

AI Portfolio Copilot

Build a smart, client-facing career profile powered by AI

● 4-Day Sprint ● Full-Stack ● Deployed + Demo Required

THE BRIEF

Most portfolios are static. A reviewer can see your projects, but cannot interact with the person behind them. Your task is to build a portfolio where anyone can **ask questions** about your work, projects, skills, and experience — and receive AI-generated answers grounded in your actual data. Think of this as building your own **AI Career Copilot**.

CORE REQUIREMENTS

Portfolio Interface

About · Skills · Projects · Experience · Education · Resume summary · Contact links. Responsive and client-facing.

AI Q&A; Layer

Answers grounded in your real data. No hallucinations. Handles unknown questions gracefully.

Data / Backend

Structured source — JSON, DB, CMS, Firebase, Supabase, or markdown. Organised and scalable.

Clean Architecture

Reusable components. Think like a product builder, not just a coder.

SUGGESTED STACK

React

Next.js

Vue

HTML/CSS/JS

Node.js

Firebase

Supabase

OpenAI API

Claude API

Gemini

RAG Pipeline

4-DAY TIMELINE

1

Plan & Architect

Content collection, system design, UI wireframing, and stack decisions.

2

Build the Frontend

All portfolio sections — About, Projects, Experience, Skills, Education, Contact.

3

Backend + AI Integration

Data layer setup, API wiring, prompt engineering, and context grounding.

4

Test, Deploy & Document

Polish, deployment, README, and 3–5 min demo video.

EVALUATION CRITERIA

Frontend

UI/UX quality · Responsiveness · Design consistency
· Interaction quality

Backend & Data

Data structure · API logic · Scalability · Maintainability

AI Implementation

Relevance · Context awareness · Prompt design ·
Grounding · Edge case handling

Product Thinking

Practicality · Demo quality · Attention to detail ·
Execution polish

DELIVERABLES

- 1 Live deployed project or runnable local setup
- 2 GitHub repository with source code
- 3 README — stack, architecture, AI design, setup, challenges, and future plans
- 4 Demo video (3–5 mins)
- 5 At least 5–10 sample Q&A; pairs for testing

This is not a design task. It is a product-thinking challenge. We are evaluating how you structure systems, build usable interfaces, handle AI intelligently, and present yourself through technology. Focus on **clarity, usefulness, and execution quality** over unnecessary complexity.
